\$100 for non-members

**VISA/MasterCard/Discover/American Express ACCEPTED**

Advance Reservations REQUIRED BY Monday, 10/14 (Cancellation requires 48-hour notice or you will be billed)

## "SMART Restorations Using Silver Diamine Fluoride (SDF) and Glass Ionomer Cement (GIC)"

Our Guest Presenter: Douglas Young, DDS, EdD, MS, MBA  
*Professor, University of the Pacific, Art Dugoni School of Dental Medicine*

**Course description:** Despite caries risk assessment and therapeutic tools such as fluoride that have been in use for decades, dental caries remains a significant problem in many populations. The ADA Caries Classification System (ADA CCS) was published to classify all stages of caries lesions and to help discern when surgical restoration versus chemical remineralization is likely needed. Silver diamine fluoride (SDF), a unique chemotherapeutic agent used with or without glass ionomer cement (GIC), may well bridge the gap between remineralization and traditional restoration, especially in certain populations and situations. This course will review the science and proper placement of SDF and GIC restorations.

**You Will Learn**

- To classify caries lesions and determine appropriate treatment using the ADA CCS
- The science of using SDF, partial caries removal, and GIC to treat caries chemically
- Proper placement technique of both SDF and GIC, separately and in combination
- How to place a silver modified atraumatic restorative treatment (SMART) restoration
